

PHP Web Development Project Ideas

Beginner Projects

- Contact Form with Email Functionality - Use PHP's mail() function and practice form validation.
- Simple Blog CMS - Create, edit, and delete posts using PHP and MySQL.
- To-Do List App - Implement basic CRUD operations with session management.

Intermediate Projects

- User Authentication System - Registration, login, password hashing, and secure sessions.
- Online Poll or Voting System - Users vote once with session/IP control.
- E-commerce Product Catalog - Product listing with filter/search functionality.

Advanced Projects

- E-commerce Website with Cart & Checkout - Full shopping cart and checkout process with payment gateway.
- Online Learning Platform - Course upload, user enrollment, and admin dashboard.
- Job Portal - Job postings, user applications, and admin control.
- Hospital Management System - Appointments, patient records, and role-based access control.
